

Quality certificate
ISO 9001 : 2000

Bred in AGRITEC, Research,
Breeding and Services Ltd.,
Sumperk

Linseed - *Linum usitatissimum L.*

AMON

- Yellow seed
- Very low linolenic acid content, less than 3%
- Oil content in dry seed matter 45%

**„Golden Ear Award“ at international Agricultural Fair
– Bread Basket in 2007**

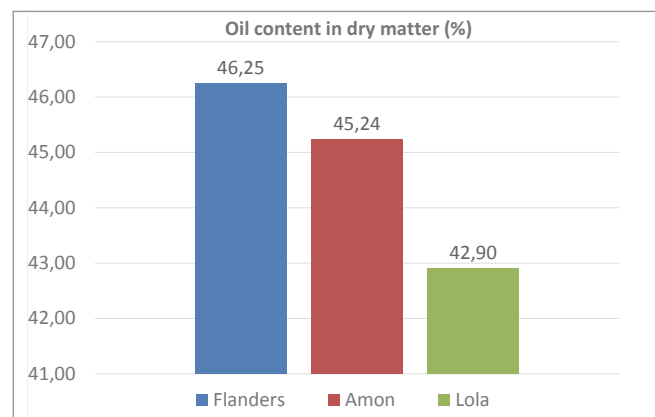

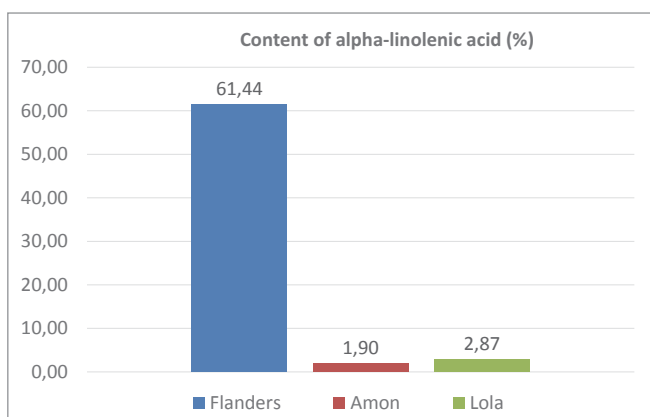

**Tested in the Registration Trials in 2004 – 2006 under the appellation AGT – 248
Registered for growing in the Czech Republic in 2007**

AMON

The main advantages

- Yellow seed
- Very low content of alpha-linolenic acid in the seed, less than 3%
- Oil content in dry matter of 45%

Economic characteristics

- Breeding of new variety of flax with blue flower
- Moderately long growing season
- Good resistance to lodging
- Average health status
- Yield of seed is the same as standard Flanders variety. It permanently overcomes low linolenic standard variety Lola by 1–3%.
